

Those who completed postgraduate (master) study of ESD branch of study or similar branch successfully can be accepted into **PhD study programme** of transport means and infrastructure **with specialization on electrical engineering equipment**. That is so on the basis of open competition which is called annually on the selected topics of the field.

The study is finished by defense of the PhD thesis. The graduates of the study obtain the PhD degree. Their studies are intended especially for finding a job in research and development in the field of electrical and electronic engineering and signalling in transport and industry. This education is also inevitable for a position of the university teacher and condition for engaging in the international cooperation in the field of science and technology.
