

New colleague wanted: Process & Technology engineer

Job description

Quad Industries is looking for an ambitious and talented Process & Technology Engineer. You will be the go-to person for various technological questions, ranging from process improvements over new technology implementations to supervising prototypes and first series. You will closely interact with the different departments within the organization.

You are responsible for

- Start-up of prototype batches & first series, and formulation of product improvements
- Production process improvement for increasing throughput and yield
- New technology implementation and technology transfer from R&D to production
- Training operators and monitoring the correct usage of technology and application of processes
- Support for daily technology related aspects in production

Requirements:

- Master degree in technics, mechanics, electronics or similar by experience
- You are a strong analytical skilled person and you are capable of independently documenting and reporting on results (statistical analysis on available data)
- You are a team player and motivator and you drive projects forward to results
- Experience in production processes improvement, evaluation and implementation
- Fluent in English
- You are a social, dynamic and independent person and work accurately and precisely

Offer:

- An exciting job in a growing company
- A varied position with challenging projects
- Independent work in a dynamic team

Who are we?

Quad Industries is a leading innovator in user interfacing and printed electronics. The company supplies a wide range of touch and switch solutions. Its hybrid flexible electronics platform also enables the combination of printing circuitry, NFC antennas, batteries and sensors with automatic component assembly to create a broad range of smart labels and tags. www.quad-ind.com
